

Concept 3:
Rube Goldberg Clock

The top bar/circles represents seconds, the middle bar/circles represents minutes, and the bottom bar/circles represents hours. The number of circles increase as time passes from 1-59 for seconds and minutes, and 1-24 for hours. As the 59 minute circles turn to 60, they disappear and 1 circle "drops" from the minute bar to the hour bar and enlarges in size. The same type of movement happens from seconds to minutes. The circles appear to "roll" down the bars as their numbers increase.
